

A delicate green fern that grows in cracks in rocks or walls. Its stalks are black until they reach the blade of the fern. Several new records were found but it could not be found in quite a few places where it was expected. Not a common fern in the area.

#### Asplenium adiantum-nigrum historical data

4 figure	Site	Grid Ref	Recorder	Date	Number	Comments
4377	White Creek	SD437771				Arnside Point hole in low cliff.. Not since 2003
